1 Developer Biography

Figure 1: Portrait of Xavier.

DR. XAVIER NOUMBISSI NOUNDOU is a Cameroonian born on September 16 1983 in DOUALA (LITTORAL region, CAMEROON).

Xavier is a “Diplom–Informatiker (DR.)” of the **University of Bremen, Bremen, Bremen, GERMANY** (May 25, 2007).

2 Introduction

YEROTH–ERP–3.0 is an **Enterprise Resource Planing** (ERP) software–system.

Users of YEROTH–ERP–3.0 could have the following roles:

- 1) « Administrator »
- 2) « Business manager »
- 3) « Cashier »
- 4) « Seller »
- 5) « Stock manager »
- 6) « Storekeeper ».

YEROTH–ERP–3.0 allows for business management tasks listed in Table 1, depending on user role.

3 Advantages of YEROTH–ERP–3.0

- 1) YEROTH–ERP–3.0 is 100% stable
- 2) YEROTH–ERP–3.0 has an alert system with two types of alerts: alerts based on stock–quantity, and time–period alerts
- 3) users have the choice between small size receipts, and, bigger size receipts (“A4”)
- 4) YEROTH–ERP–3.0 runs on the Linux operating system, because Linux is stable, performant, and less vulnerable to security breaches in comparison to other operating systems (“Windows 10”)

- 5) YEROTH–ERP–3.0 has an user interface “Sales” to view sale information (Figure 2), and thus enables users to make managerial decisions
- 6) YEROTH–ERP–3.0 has an interface “Business dashboard” that generates financial accounting reports, from sale and payment information, to help managers to make “business decisions”.

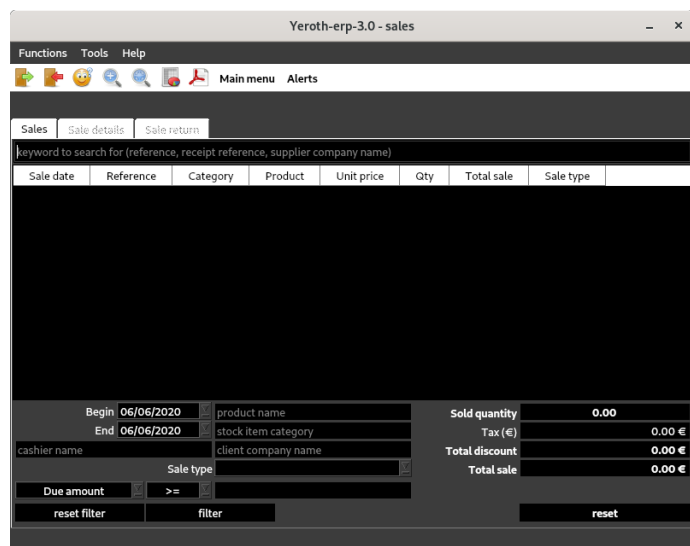

Figure 2: Sale–information window.

4 Alert System

Users with roles « Administrator » or « Business manager » are the ones able to create alerts.

YEROTH–ERP–3.0 allows its users to create two types of alerts:

- 1) alerts over stocks–quantities
- 2) alerts over time intervals (this helps for perissable articles and for sales discounts over a period of time).

4.1 Alerts over Stock–Quantity

An alert over a stock–quantity is a message that is sent to a pre–determined user whenever “pre–determined” stock–quantity (X) of a specific article–stock is reached.

For instance, Xavier (« Business manager ») could create an alert for stock “mango” that will be triggered whenever stock “mango” quantity reaches 100; An alert–message is sent to user John (« Storekeeper »).

4.2 Alerts over Time–Period

A time–period is defined by a starting–date and an ending–date (dates are from the “gregorian” calendar).

An alert over a time–period (T) is a message that is generated, sent to a pre–determined user, and kept within YEROTH–ERP–3.0 from T’s starting–date up to T’s ending–date.

For example, an alert with a message has to be sent to Paul (« Cashier ») when the date of May 05th is reached. The alert message specifies that a rebate of 20% has to be applied on every sale of yoghourt ‘trèsbon’ during a time interval of 2 weeks.

5 Database Management System

YEROTH–ERP–3.0 uses ‘MariaDB’ as the standard DBMS. ‘MariaDB’ is very stable, very performant, and free–software.

6 Conclusion

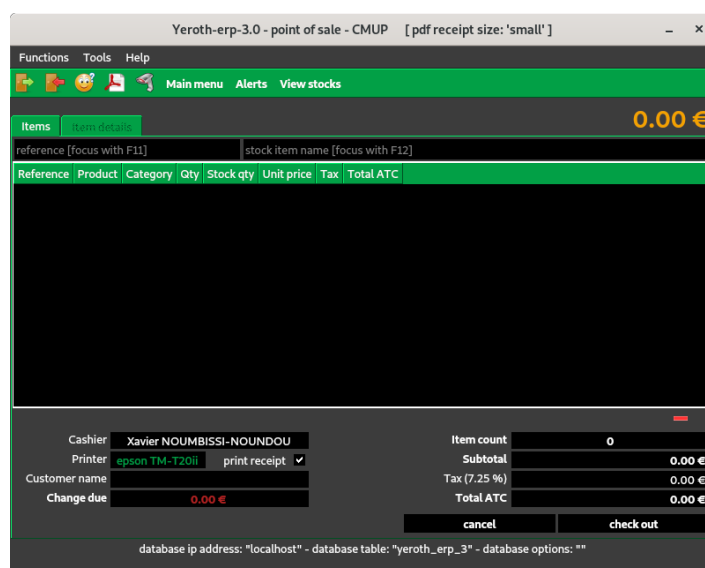

Figure 3: Point–of–sale window.

Figure 3 illustrates the window for selling articles.
